
H1b post-hoc (descriptive): 3 GPa, no fit changes sign; 10 GPa, three-source B/C cross in the correct direction ~380–390 K early
Primary: 3 GPa, target coe
Secondary: 10 GPa, target stv
ΔG = G(coe) − G(q) (meV/atom)
ΔG = G(stv) − G(coe) (meV/atom)
Temperature (K)
reference T₀ = 1193 K
reference T₀ = 1745 K
ds62 reference ±2σ(ΔH)
ds62 reference
B, two-source {q, trd}
B, three-source {q, trd, crst}
B, two-source {q, coe}
B, three-source {q, trd, coe}
grey: all other configuration × scaling × arm fits (72 total)
